Introduction of Toray's materials for AM

What is PPS(Polyphenylene sulfide) resin?

<Main raw materials>
p-Dichlorobenzene
Sodium sulfide

Crystalline thermoplastic resin

Melting point : 280 degree C Glass transition point : approx. 90 degree C

5% reduction weight temperature : approx. 480 degree C

Water absorption (24hr in water) : 0.02%

Features

- high strength, high rigidity, fatigue endurance, creep resistance
- excellent long-term heat resistance (UL temperature index 200 - 240 degree C)
- excellent chemical resistance (chemical resistance after fluorine resin)
- UL 94 V-0 without blending the flame retardant
- good electrical characteristics
- good dimensional stability
- excellent physical properties even under high temperature and high humidity

Long-term durability

Flame retardance

High Strength

Chemical resistance

Solvent	PPS	PEEK	PA6	PA12
Caustic soda	✓	✓	✓	✓
Concentrated hydrochloric acid	✓	✓	✗	✗
Toluene	✓	✓	✓	✓
Acetone	✓	✓	✓✗	✓
NMP	✓	✓	✗	✗
Ethylene glycol	✓	✓	✓	✓
Gasoline, greases	✓	✓	✓	✓

※Chemical resistance under room temp. solvent

【Chemical resistance in bulk-molding material】

✓ : No change in shape

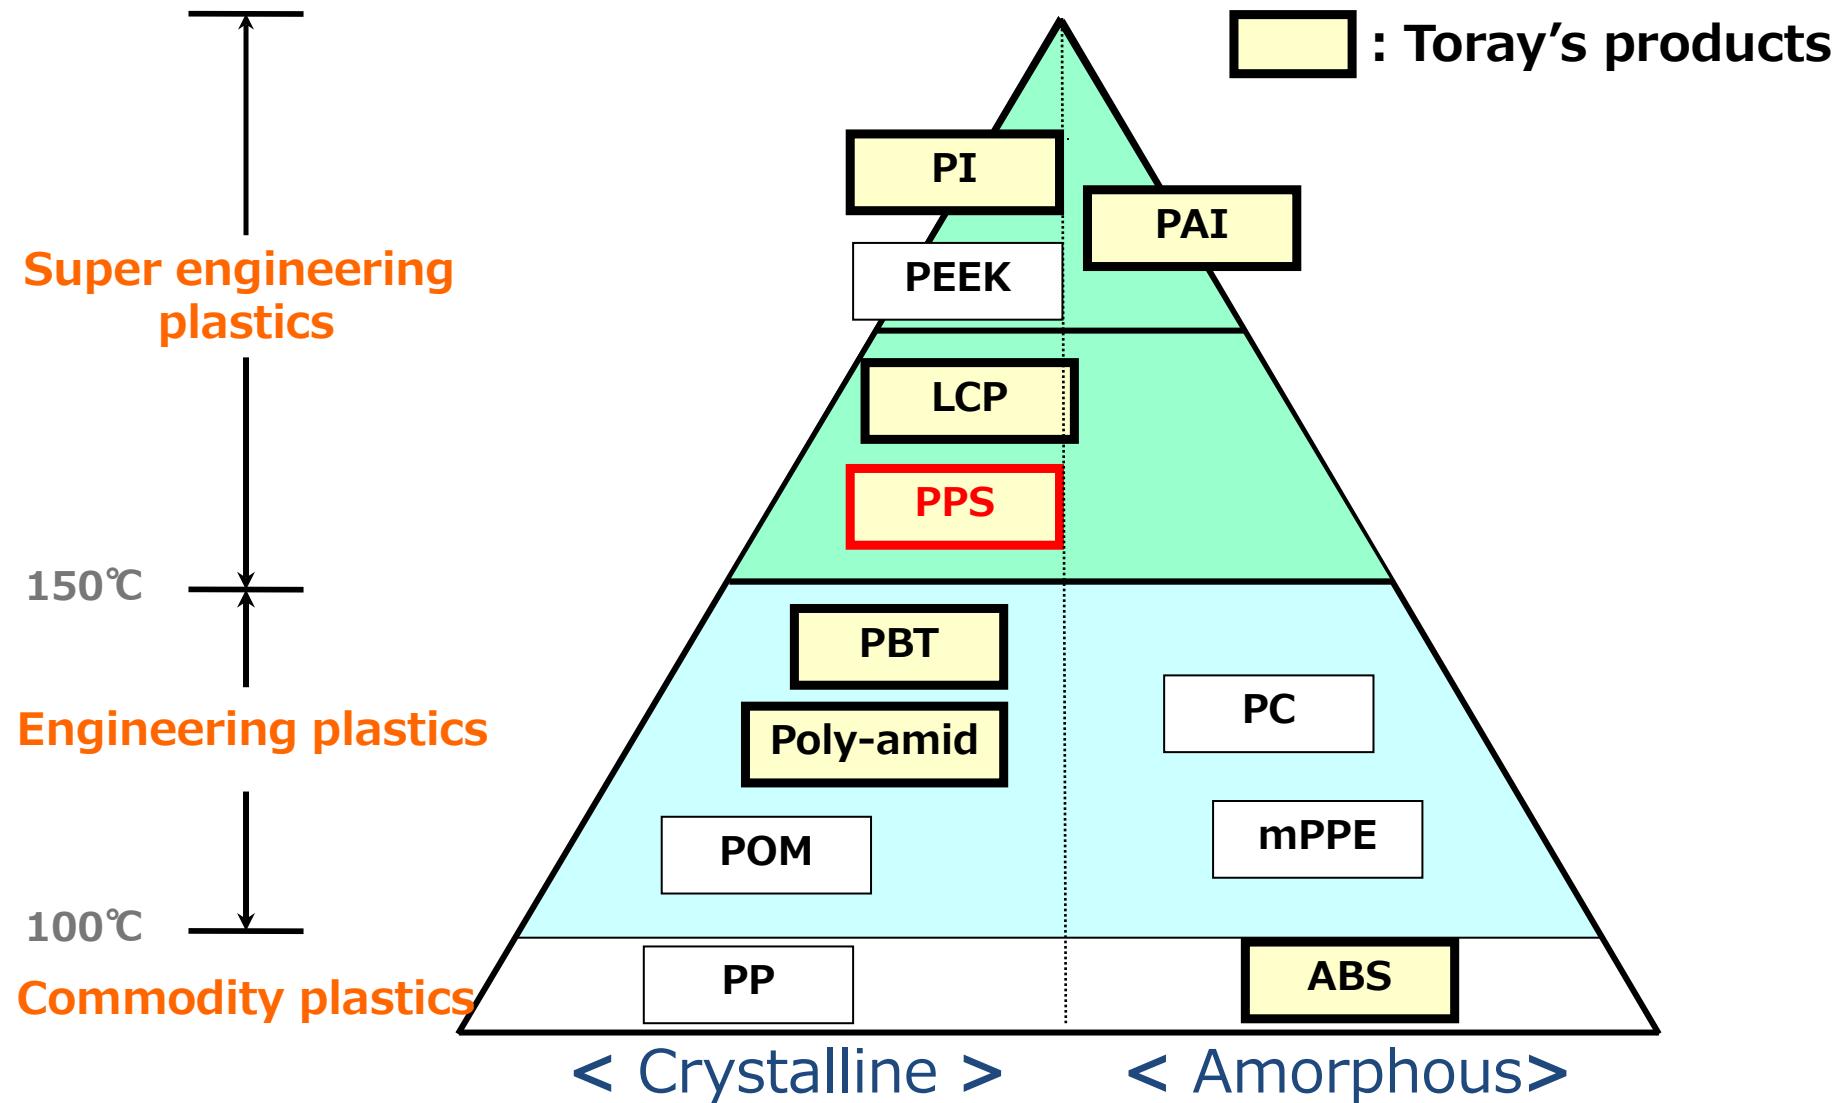

✓✗ : Shape retaining but partially deformed

✗ : Dissolved or deformed

※resource : Plastic encyclopedia, floncemical chemical resistance data

Comparison of resin characteristics

Heat resistance

Toraymill™ PPS for 3D printer

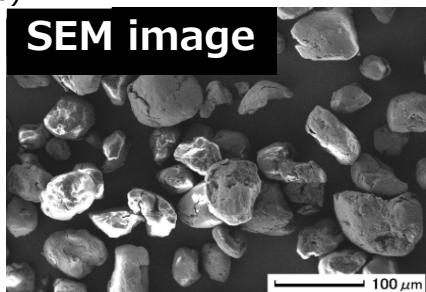

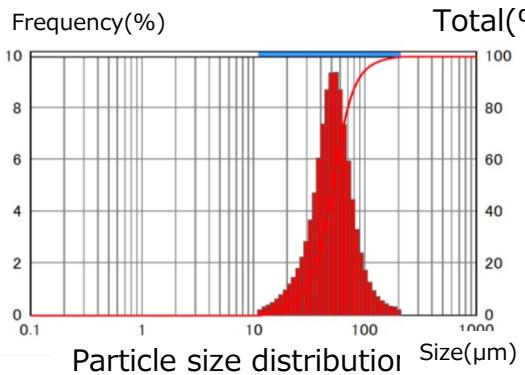

1 . Toraymill™ PPS

Toraymill™ PPS has high-flow and polymer properties and is suitable for the Powder Bed Fusion process, which is the major 3D printing process.

2 . Features

(1) Particle size distribution (D50=Approx.50μm)

(2) High-flow powder

Current lineup and refresh rate

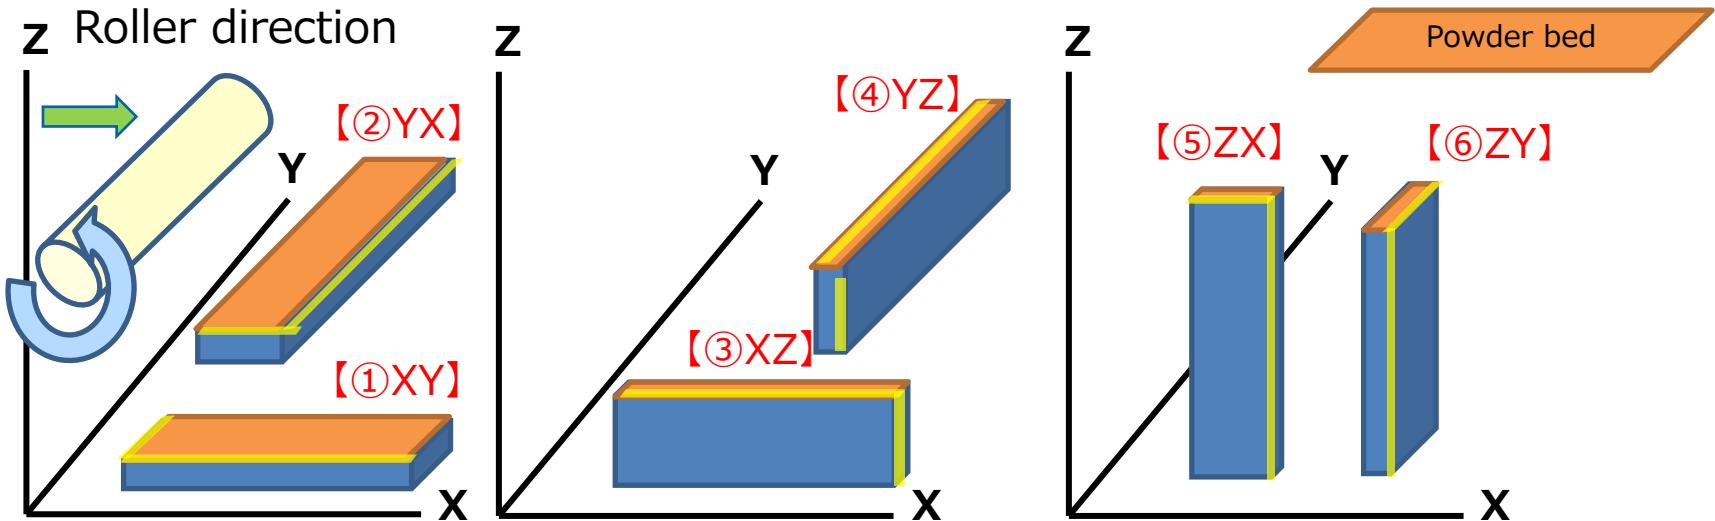

Line up	Refresh rate
(1) Unreinforced PPS	Refresh rate: 80% (recommended)
(2) Glass fiber reinforced PPS	Refresh rate: 70% (recommended)
(3) Carbon fiber reinforced PPS	Under development to improve refresh rate

Mechanical properties

Item(X-Y direction)		Unit	PPS			PA12
			Unreinforced	GF reinforced (25%)	CF reinforced (30%)	Unreinforced
Material for 3D printing		—	MIX	MIX	Virgin	MIX
Tensile	Strength	MPa	49	65	87	48
	Elongation	%	2.2	2.3	1.0	14.5
	Modulus	GPa	2.1	2.9	—	—
Flexural	Strength	MPa	63	104	123	61
	Modulus	GPa	3.3	3.8	8.6	1.4
	Strain	%	1.8	2.4	—	15.3
Charpy impact strength		%	—	—	2.5	—
Density		kJ/m ²	1.22	—	1.38	0.99
Temp. of deflection under load [Flat wise 1.82 MPa]		°C	123	237	247	100
Linear expansion coefficient (-40~200°C)	X-Y	×10 ⁻⁵ /K	7.0	3.8	1.1	—
	Y-X	×10 ⁻⁵ /K	7.1	5.4	3.4	—
Melting point		°C	280			170
Crystallization temp.		°C	190			144
Flame retardance		UL	V-0			—

Above data is a representative example of the measurement values obtained under specific conditions.

Anisotropy

Material			PPS (Unreinforced)		※MIX	
Direction			①XY	②YX	③XZ	④YZ
Properties	Tensile strength	MPa	49	49	45	50
	Tensile Elongation	%	2.2	2.2	2.1	2.2
	Tensile Modulus	GPa	2.1	1.3	2.0	1.8
	Flexural Strength	MPa	63	66	77	74
	Flexural Modulus	GPa	3.3	3.1	3.6	3.6
	Flexural Strain	%	1.8	1.8	1.9	1.8

※MIX: Virgin: Recycle=2:8

Above data is a representative example of the measurement values obtained under specific conditions.

Anisotropy

Material			GF reinforced PPS(GF25%) ※MIX					
Direction			①XY	②YX	③XZ	④YZ	⑤ZX	⑥ZY
Properties	Tensile strength	MPa	65	52	-	-	-	30
	Tensile Elongation	%	2.3	1.9	-	-	-	1.2
	Tensile Modulus	GPa	2.9	2.6	-	-	-	2.3
	Flexural Strength	MPa	104	90	-	-	-	76
	Flexural Modulus	GPa	3.8	3.6	-	-	-	4.0
	Flexural Strain	%	2.4	2.4	-	-	-	1.9

※MIX: Virgin: Recycle=3:7

Material			CF reinforced (CF30%) PPS ※Virgin					
Direction			①XY	②YX	③XZ	④YZ	⑤ZX	⑥ZY
Property	Tensile strength	MPa	87	58	82	54	26	26
	Tensile elongation	%	1.0	1.2	1.0	1.3	0.9	0.9
	Flexural strength	MPa	123	88	111	76	33	36
	Flexural modulus	GPa	8.6	5.4	7.9	4.3	2.3	2.1
	Impact strength	kJ/m ²	2.5	2.1	2.8	2.4	1.2	1.2

※Virgin: Virgin 100%

Above data is a representative example of the measurement values obtained under specific conditions.

Application example of PPS 3D printed parts

Duct, Wind outlet, Bracket, Throttle body etc.	Turbo charger(Exhaust side)
GF reinforced PPS	CF reinforced PPS
Pump(Casing, Impeller)	Cooling pipe
GF reinforced PPS	GF reinforced PPS

- a)To make a complicated part at one time.
- b)To reduce the weight compared with metal by 30 – 50%

(1) Aerospace and Train and automotive

<Method: UL94V>

Thickness(mm)	Result
0.49 t	V-0
0.68 t	V-0
0.95 t	V-0
1.75 t	V-0
2.26 t	V-0

Above data is a representative example of the measurement values obtained under specific conditions.

Application:
Duct, Wind outlet, Bracket,

Approval by Japan Railway Rolling Stock & Machinery Association

Suitable for small lots parts

Application by features

High heat resistance for hot water
Chemical resistance

(2)Impeller

For industry usage

Fluid: Hot water (60 ° C, 80 ° C)
Lubricant etc.

For automotive usage

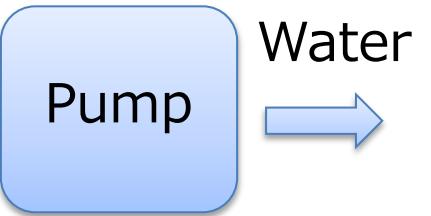

Capable for evaluating functionality
in high-temperature fluids

Application by features

High heat resistance for hot water
Chemical resistance

(3)Tube and pipe for parts in water

【Burst pressure test】

Water fitting
Cheese
Elbow
Socket etc.

【Results】

	Burst pressure (MPa)	T tube (Joint: polishing)	L tube (Joint: polishing)
3D printed parts	Unreinforced PPS	5.8MPa	5.4MPa
Injection	GF reinforced PPS	7.0MPa	-
Injection	GF+ Elastomer	12.0MPa	-

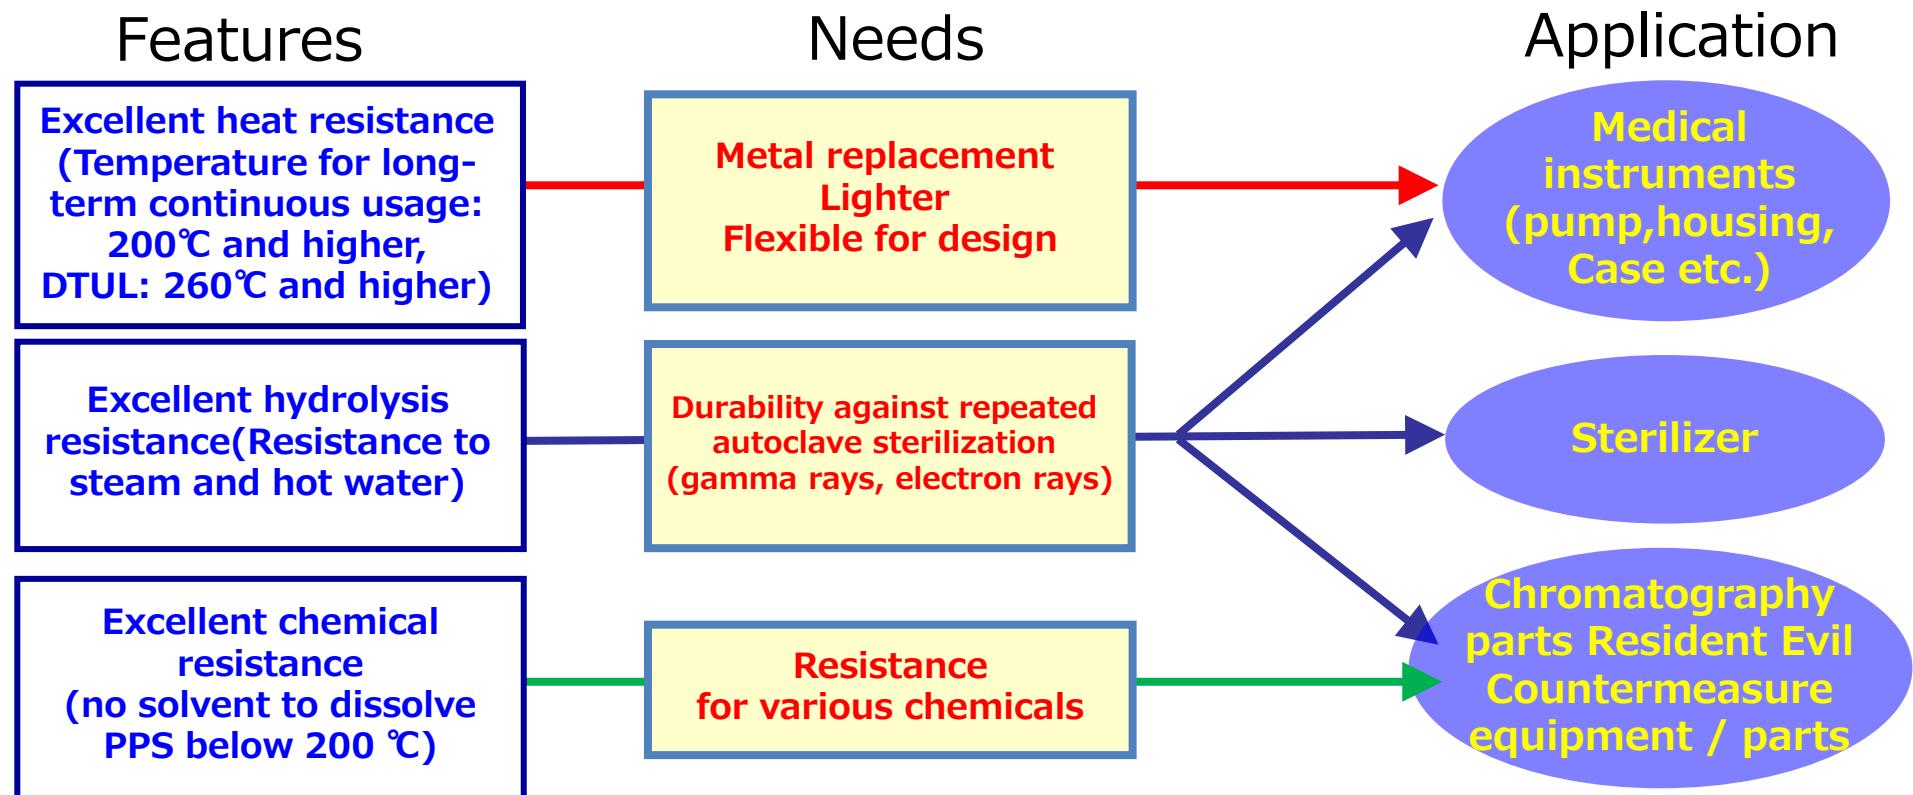

Above data is a representative example of the measurement values obtained under specific conditions.

Prototype: Available
Practical part (small lot products):
Can be used with shape optimization

Capable for evaluating functionality in high-temperature fluids

(4) Medical facility

※The biocompatibility of PPS resin is not confirmed. Toray assumes such application as devices not to contact directly with living bodies.

Suitable for small lots parts

Toray's Total Solution for AM business

Various detailed data

1. Strength

1) Temperature dependence(Unreinforced, x-y direction)

- ① Tensile strength
- ② Flexural strength
- ③ Flexural modulus

2. Heat resistance

3. Linear expansion coefficient

4. Flame retardence(Unreinforced PPS／UL)

5. Pressure resistance

6. Electrical property

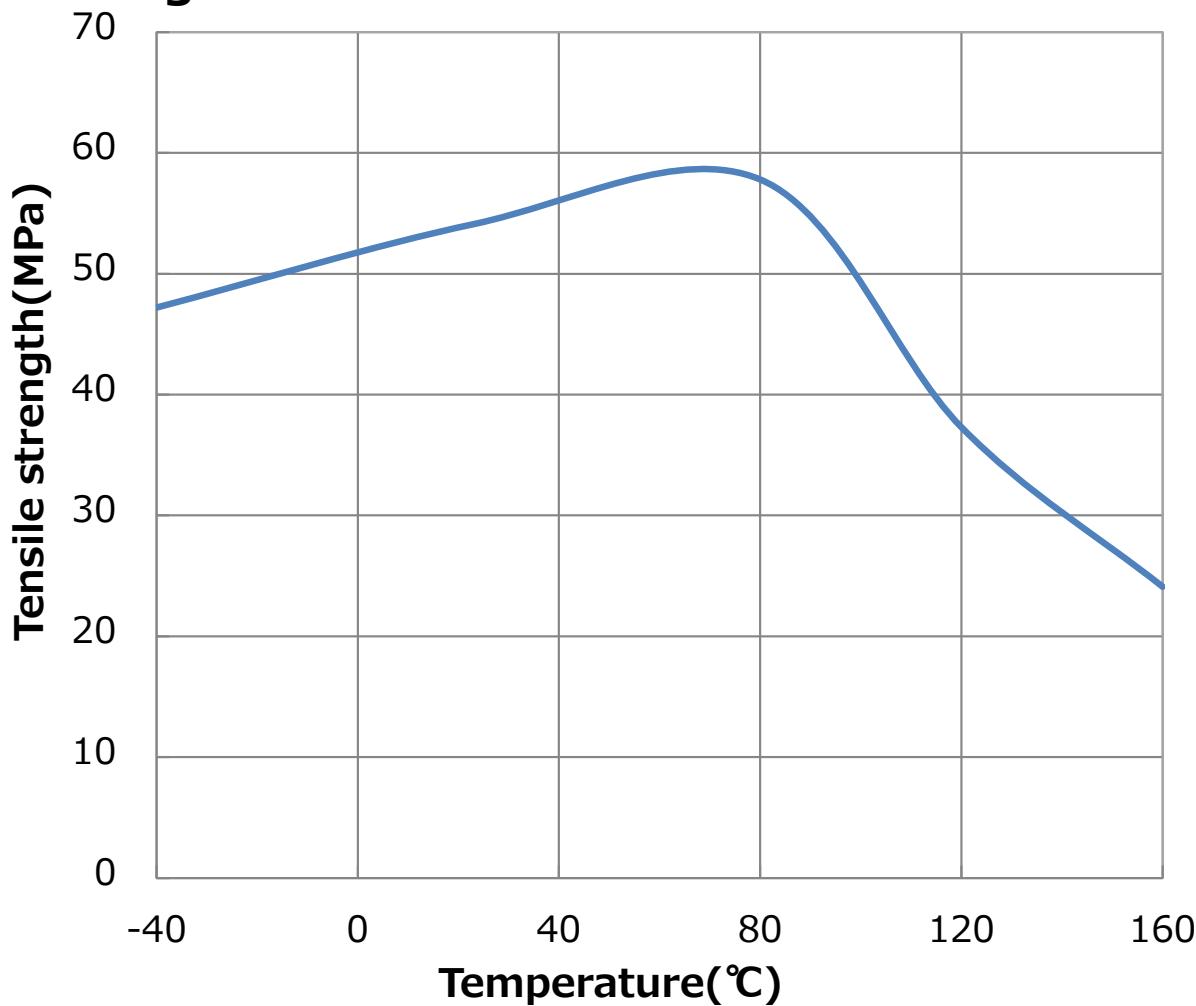

7. Heat Dissipation

8. Electromagnetic wave shield (Electric field)

9. Electromagnetic wave shield (Magnetic field)

1. 1) Temperature dependence(Unreinforced, x-y direction)

① Tensile strength

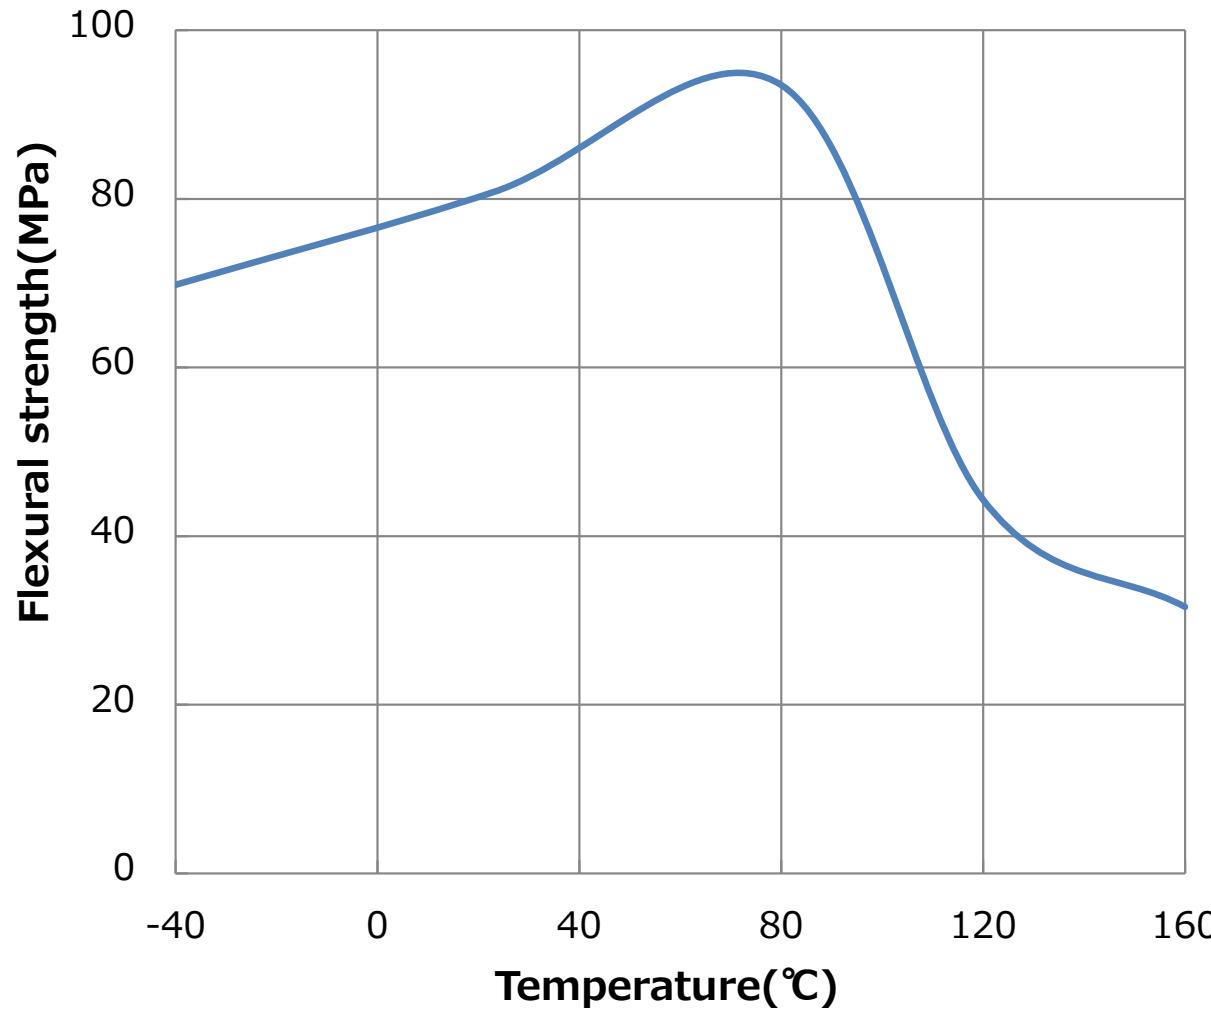

※The data for GF reinforced and CF reinforced is under acquisition.

Above data is a representative example of the measurement values obtained under specific conditions.

1. 1) Temperature dependence(Unreinforced, x-y direction)

②Flexural strength

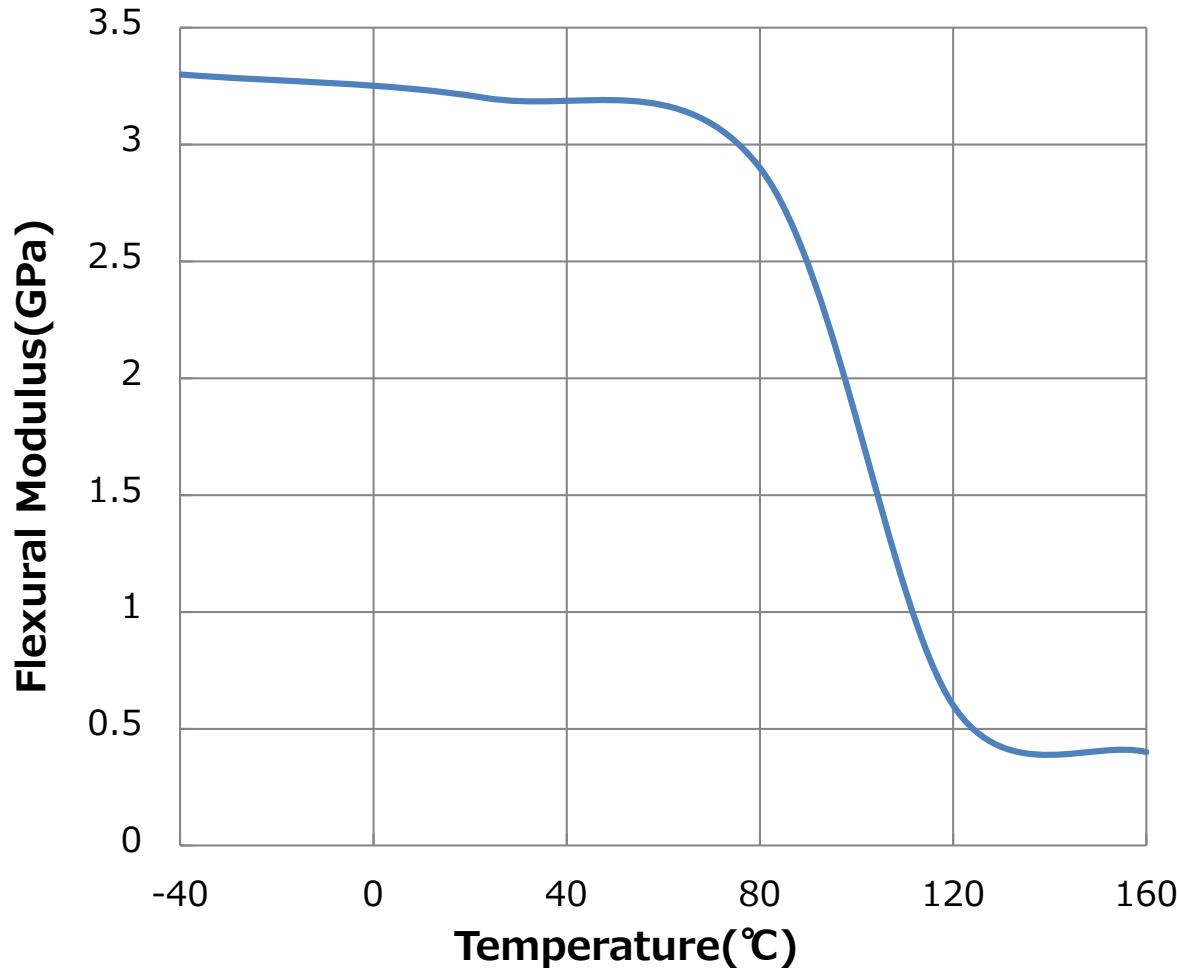

※The data for GF reinforced and CF reinforced is under acquisition.

Above data is a representative example of the measurement values obtained under specific conditions.

1. 1) Temperature dependence(Unreinforced, x-y direction)

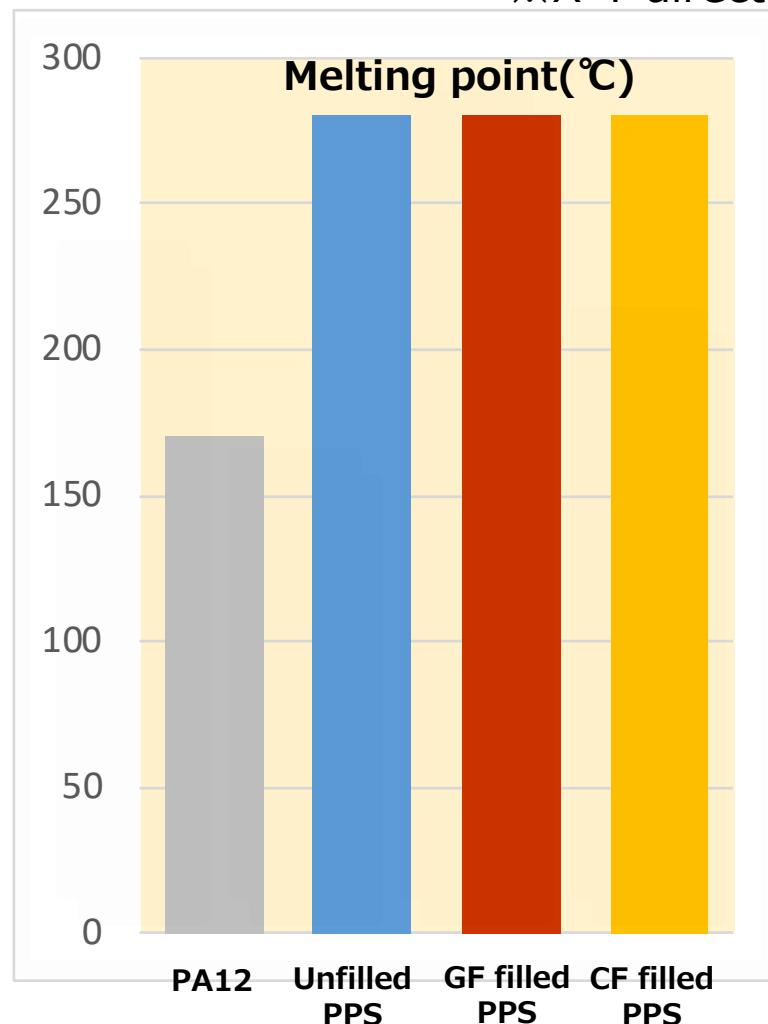

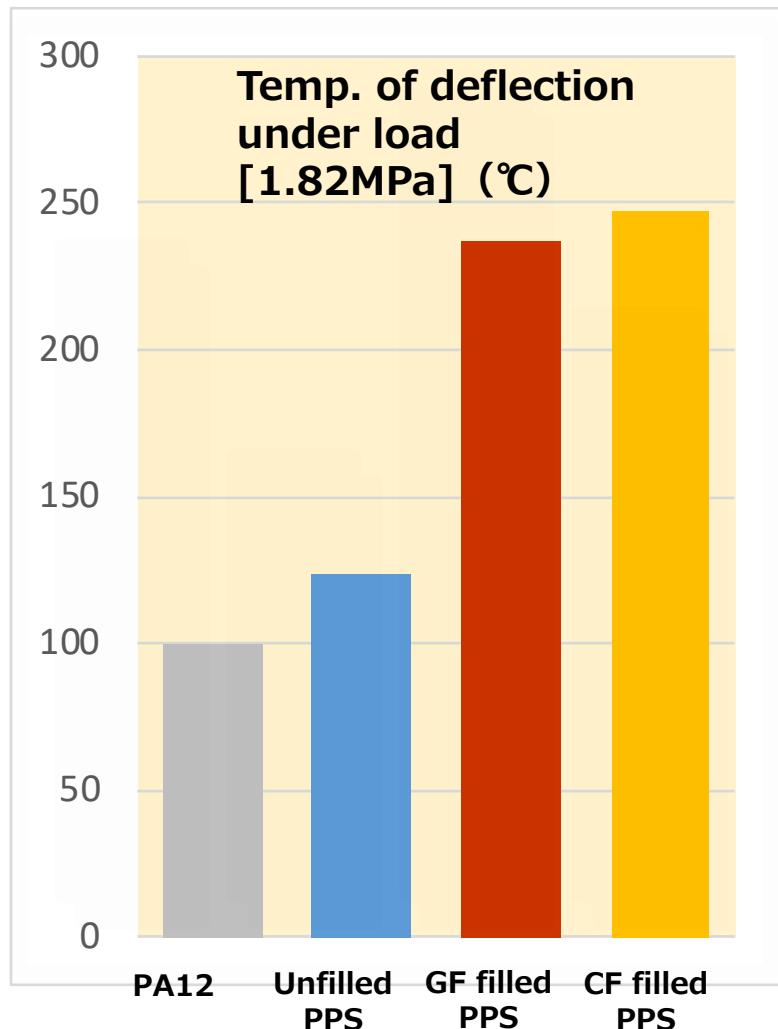

③Flexural modulus

※The data for GF reinforced and CF reinforced is under acquisition.

Above data is a representative example of the measurement values obtained under specific conditions.

2. Heat resistance

Above data is a representative example of the measurement values obtained under specific conditions.

3. Linear expansion coefficient

【Conforming to ISO 11359

(measurement of linear thermal expansion coefficient and glass transition temperature)】

Item		Unit	Unreinforced PPS	Glass 25% reinforced PPS	CF 30% reinforced PPS
Linear Expansion coefficient	X-Y direction	-40~80°C	×10 ⁻⁵	5.5	3.2
		80~200°C	×10 ⁻⁵	8.4	4.3
	Y-X direction	-40~80°C	×10 ⁻⁵	5.5	3.9
		80~200°C	×10 ⁻⁵	8.6	6.8
	Z-X direction	-40~80°C	×10 ⁻⁵	5.6	5.0
		80~200°C	×10 ⁻⁵	7.7	10.7

Above data is a representative example of the measurement values obtained under specific conditions.

4. Flame retardance (Unreinforced)

<Method: UL94V>

[20mm vertical combustion test (IEC60695-11-10 B method, ASTM D3801)]

Attach the test piece vertically to the clamp. Contact the test piece for 10 seconds twice with 20mm flame. Determine V-0, V-1, V-2 or Not by its combustion behavior.

Thickness(mm)	Result
0.49 t	V-0
0.68 t	V-0
0.95 t	V-0
1.75 t	V-0
2.26 t	V-0

※ UL standard (blue card): Not acquired yet

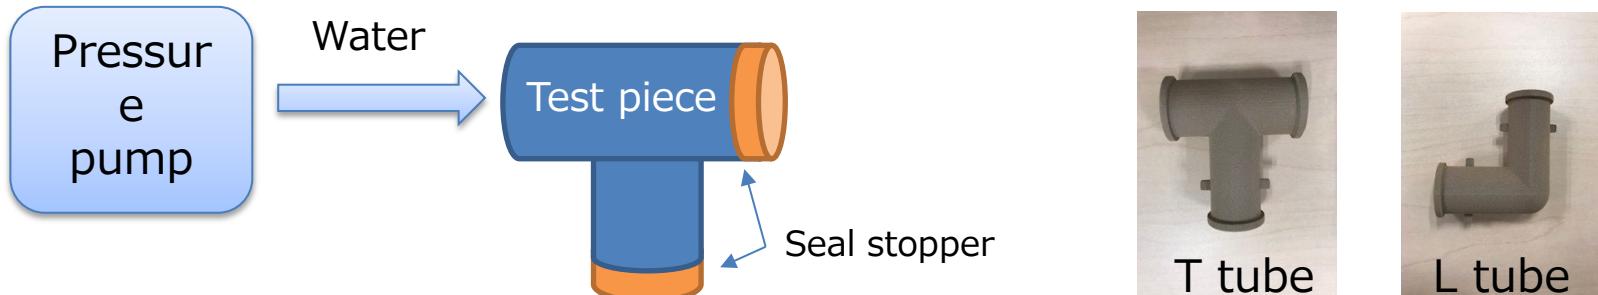

Criteria for determination	Classification		
	V-0	V-1	V-2
Combustion time of test piece	Less than 10 seconds	Less than 30 seconds	Less than 30 seconds
Total combustion time of 5 test piece	Less than 50 seconds	Less than 250 seconds	Less than 250 seconds
Combustion time of each test piece and glowing time	Less than 30 seconds	Less than 60 seconds	Less than 60 seconds
Combustion up to the clamp	Non	Non	non
Cotton ignition of dripping	Non	Non	Non

Above data is a representative example of the measurement values obtained under specific conditions.

5. Pressure resistance

【Pressure breaking test】

Apply pressure by water to the T-tube or L-tube test piece.
Measure the pressure at the point of breaking the test piece.

Breaking pressure (MPa)	T tube (Joint area polished)	L tube (Joint area polished)
Unreinforced PPS	5.8MPa	5.4MPa
GF reinforced PPS	Under acquisition	Under acquisition
CF reinforced PPS	Under acquisition	Under acquisition

※PPS+GF40%(Injection grade) : 7.0MPa

PPS+GF30% + Elastomer(Injection grade) : 12.0MPa

<Conditions>

- Manual test pump : Made by Kyowa T-30ON (Maximum pressure: 30MPa)
- Test piece : 3D printed parts by PPS
- Wall thickness : 2.8mm(Peripheryφ21.7mm, Inner periphery φ16.1mm)

Above data is a representative example of the measurement values obtained under specific conditions.

6. Electrical Properties

Method : According to IEC 62631-2-1(Automatic balance bridge method)
Sample size : 80×80×t3(mm)
Frequency condition : 1 MHz
Electrode size: Main Electrode diameter φ36mm
Annular electrode inner diameterφ38 mm
Electrode mat. : Conductive silver paint
Condition control : 23 °C±2 °C, 50 %RH±5 %RH×24 h<
Test environment : 23 °C±2 °C, 50 %RH±5 %RH
Measuring device : Precision LCR meter E4980A
(Made by Agilent Technologies Ltd.)

Item	Unit	Unreinforced PPS	GF reinforced PPS(25%)	CF reinforced PPS (30%)
Volume Resistivity	Ωcm	2.80×10^{17}	–	1.30×10^4
Dielectric Strength	kV/mm	18.5	–	5.7
Dielectric constant(ϵ_r)	–	3.86	3.86	–
Dielectric tangent($\tan\delta$)	–	0.00124	0.00161	–

Above data is a representative example of the measurement values obtained under specific conditions.

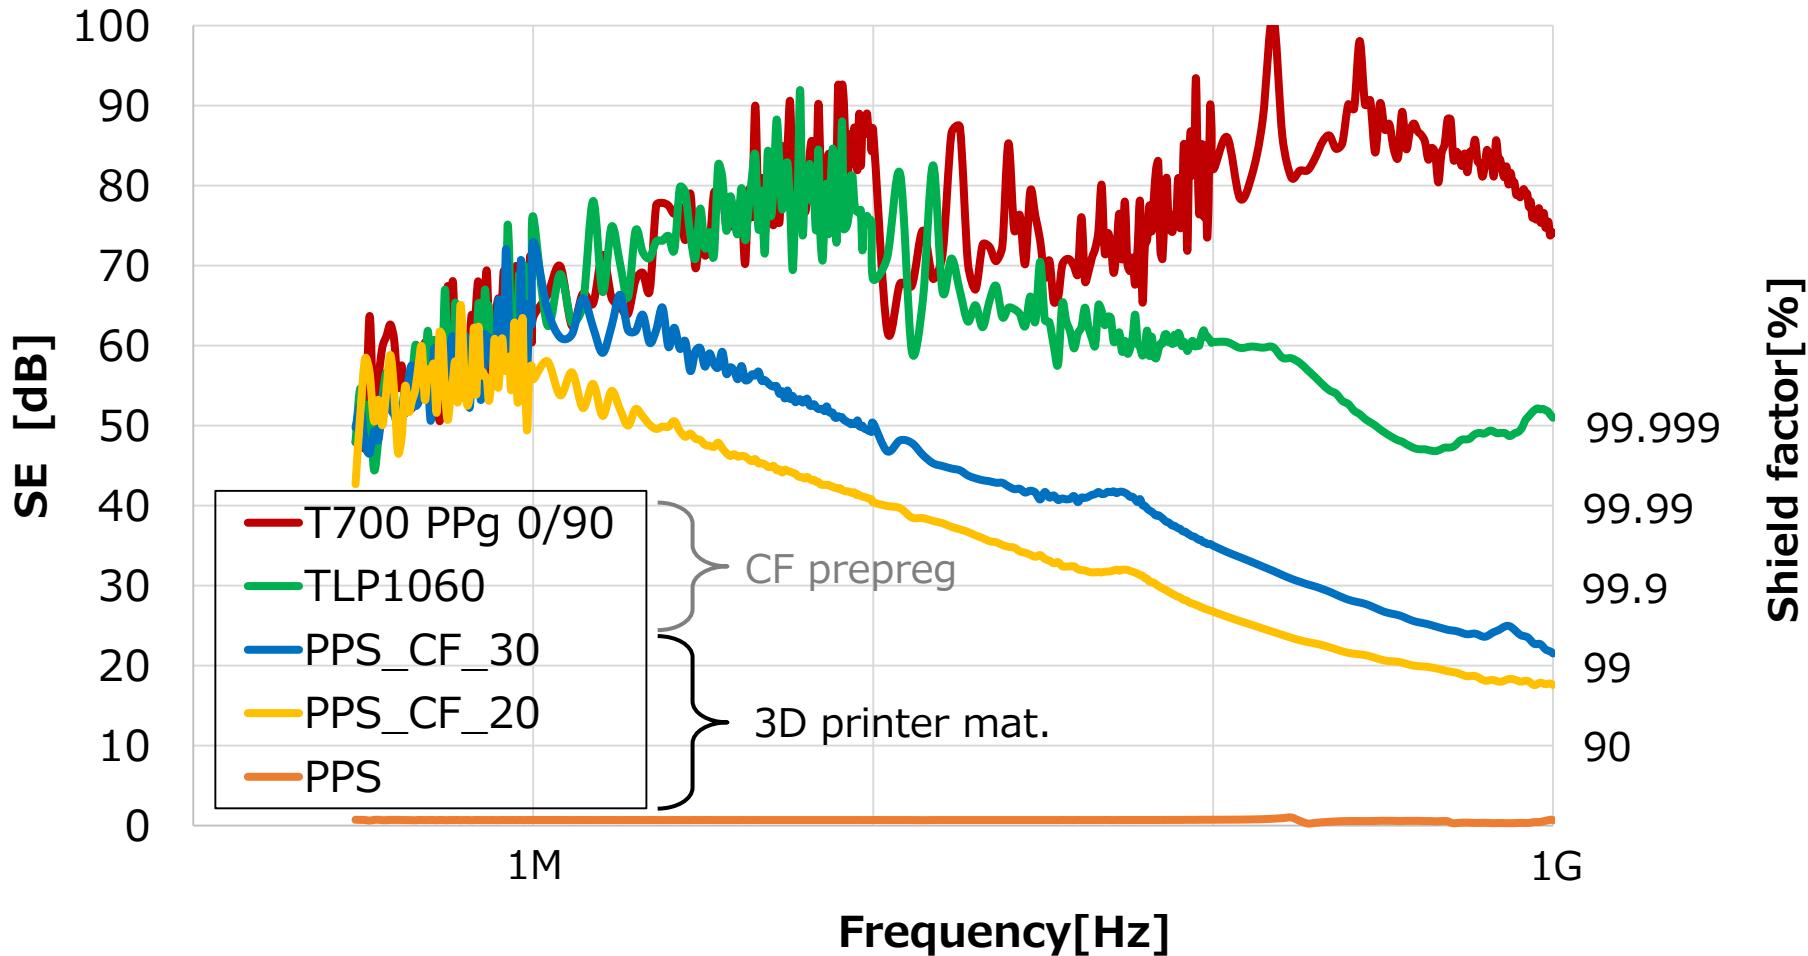

7. Heat Dissipation

The diagram shows two horizontal curly braces above a table. The left brace spans the first two columns and is labeled '3D printing mat.'. The right brace spans the last two columns and is labeled 'Injection moldings mat.'

	Unit	PPS+GF25	PPS+CF20	PPS+CF30	PPS+GF40 (A504X90)
Thermal conductivity (Hot disk method)	W/m·K	0.5	0.8	0.9	0.5

Above data is a representative example of the measurement values obtained under specific conditions.

8. EMI shield_Electric field_0.3k~1.0GHz

9. EMI shield_Magnetic field_0.3k~1.0GHz

Above data is a representative example of the measurement values obtained under specific conditions.

Comparison with injection moldings

Item	Unit	3D printing mat. (X-Y direction)			Injection		
		Unreinforced (MIX)	GF reinforced (MIX)	CF reinforced (Virgin)	Un reinforced	GF reinforced	CF reinforced
Reinforced mat.	%	—	25	30	—	30	30
Tensile	Strength	MPa	49	65	87	85	155
	Elongation	%	2.2	2.3	1.0	8.0	1.7
	Modulus	MPa	2.8	2.9	—	—	—
Flexural	Strength	MPa	63	104	123	140	230
	Modulus	GPa	1.8	3.8	8.6	3.9	12.0
	Strain	%	3.3	2.4	—	—	—
Density	g/cm ³	1.22	—	1.38	1.34	1.57	1.46
Temp. of deflection under load [Flat wise 1.82MPa] (°C)	°C	123	237	247	105	>260	>260
Flame retardance	UL	V-0	V-0	V-0	V-0	V-0	V-0
Linear expansion coefficient	X -Y ×10 ⁻⁵ /K	7.0	3.8	1.1	6.2	3.0	1.1
	Y-X ×10 ⁻⁵ /K	7.1	5.4	3.4	6.6	3.4	1.9

Above data is a representative example of the measurement values obtained under specific conditions.
